

Global Trends in Education Development and Communication

Moderator's Guide & Presentation Notes

1. Introduction

Opening with *Ganga to Volga*

Rahul Sankrityayan, one of India's greatest scholars and travelers, wrote *Ganga to Volga*, tracing the exchange of knowledge and cultures between India and Russia. His journey symbolizes the movement of ideas across civilizations, much like how education today transcends national borders and disciplines.

Education is no longer confined to a classroom; it is shaped by **technology, global communication, and international collaboration**. Today, we will explore how **AI, global partnerships, and philosophical approaches** are redefining education.

Our session features three distinguished speakers:

1. **Andrey Reus** – Delving into the ontology of education and its philosophical foundations.
2. **Maria Frolova** – Presenting an international educational initiative across India, Russia, and Mexico.
3. **Nikolay Andreichenko** – Exploring the symbiosis of AI and human intelligence.

2. Speaker Introductions & Transitions

Speaker 1: Andrey Reus – The Ontology of Education (15–20 min)

- Andrey Reus, a former Deputy Minister of Industry and Energy, will discuss the **philosophical underpinnings of education** and how ideology, history, and evolving needs shape learning.
- *Transition to next speaker:* "As we reflect on the fundamental nature of education, we must also consider how global partnerships enhance learning. Our next speaker, Maria Frolova, will introduce a unique international education initiative."

Speaker 2: Maria Frolova – The India-Russian-Mexican Program (10 min)

- Maria Frolova, an associate professor with a PhD in Economics, has worked on education technologies and communication strategies. Her program fosters **joint learning and cultural exchange** across three nations.
- *Transition to next speaker:* "While international collaboration fosters better learning experiences, we must also address the role of AI in shaping education. Our final speaker, Nikolay Andreichenko, will explore the relationship between AI and human intelligence."

Speaker 3: Nikolay Andreichenko – The Symbiosis of Homo Sapiens and AI (10 min)

- Nikolay Andreichenko is a methodologist and Vice President at the Togliatti Academy of Management. His work explores how humans and AI can **collaborate rather than compete** in education.

3. Discussion & Tailored Questions

For Andrey Reus (Ontology & Future of Education)

- What elements of past education models should we bring back into modern systems?
- How can philosophical approaches to education help balance **technical skills and humanistic learning**?

For Maria Frolova (International Education & Collaboration)

- What are the biggest challenges in implementing cross-cultural educational programs?
- How does cultural diversity enhance the learning experience for students?

For Nikolay Andreichenko (AI & Education)

- How can education systems prepare students for AI-driven workplaces?
- Should traditional education models shift away from memorization, given AI's ability to store and analyze information instantly?
- Some people fear that AI will **replace human intelligence**. How do we ensure that AI remains a tool for enhancement rather than a substitute?

4. Summary & Closing Remarks

- Today, we have seen that education is **a living system**, influenced by AI, global collaboration, and philosophical evolution.
- Dr. Reus reminded us that education is not just about skills but also about **identity, culture, and intellectual growth**.
- Dr. Frolova showed us that international cooperation can **enhance education quality** through shared knowledge.
- Dr. Andreichenko emphasized that AI should **work alongside humans**, not replace them.

Final Thought: "Education is evolving, and we must evolve with it. The challenge is not just to keep up with these changes but to shape them in a way that benefits humanity. Thank you to our speakers and audience for this enlightening discussion!"
